REISSUE APPLICATION BY THE INVENTORS, OFFER TO SURRENDER PATENT		Docket Number (Optional) 30-4016 REISSUE 11872-022001	PTO J1046 U.S. 09/779877 02/08/01
This is part of the application for a reissue patent based on the original patent identified below.			
Name of Patentee(s) Hasegawa et al.			
Patent Number 5,868,123		Date Patent Issued February 9, 1999	
Title of Invention MAGNETIC CORE-COIL ASSEMBLY FOR SPARK IGNITION SYSTEMS			
I am the inventor of the original patent.			
I offer to surrender the original patent.			
1. <input checked="" type="checkbox"/> Filed herein is a certificate under 37 CFR 3.73(b). 2. <input type="checkbox"/> Ownership of the patent is in the inventor(s), and no assignment of the patent has been made.			
One of boxes 1 or 2 above must be checked.			
The written consent of all assignees owning an undivided interest in the original patent is included in this application for reissue.			
Signature		Date	
Typed or printed name			
The assignee owning an undivided interest in said original patent is <u>AlliedSignal Inc.</u> , and the assignee consents to the accompanying application for reissue.			
I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001 and that such willful false statements my jeopardize the validity of the application, any patent issued thereon, or any patent to which this declaration is directed.			
Name of assignee AlliedSignal Inc.			
Signature of person signing for assignee <i>R. M. H. Criss</i>		Date February 7, 2001	
Typed or printed name and title of person signing for assignee Roger Criss, Esq., Assistant Secretary, AlliedSignal Inc.

CERTIFICATE UNDER 37 CFR §3.73(b)

Under 37 CFR §3.73(b), AlliedSignal Inc., a corporation, certifies that it is the assignee of the entire right, title and interest in the patent application identified above by virtue of:

☐ An assignment from the inventors of the patent application identified above. The assignment was recorded in the Patent and Trademark Office at Reel __, Frame __ on __.

☒ A chain of title from the inventors of the patent application identified above, to the current assignee as shown below. Copies of the assignments or other documents in the chain of title are attached.

1. From Ryusuke Hasegawa, John Silgailis and Donald Allen Grimes to AlliedSignal Inc. recorded in the Patent and Trademark Office at Reel 8583, Frame 0405 on June 30, 1997.

The undersigned has reviewed all the documents in the chain of title of the patent application identified above and, to the best of undersigned's knowledge and belief, title is in the assignee identified above.

The undersigned, whose title is supplied below, is empowered to act on behalf of the assignee.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are

STATUS OF CLAIMS AND SUPPORT FOR CLAIM CHANGES
37 C.F.R. §1.173(c)

This paper is being filed concurrently with the reissue application.

Claims 1-7 have not been changed. Claims 8-18 have been added. Claims 1-18 are pending in this reissue application.

New claim 8 is similar to claim 1, but does not recite that the magnetic core is iron-based, does not recite that the core includes certain metallic elements, glass forming elements or semi-metallic elements, and does not specify that the core is heat treated. Instead, claim 8 recites that the core comprises an amorphous metal, is non-gapped and has a permeability ranging from about 100 to 300. Support for these recitations can be found, for example, in col. 3, lines 13-26 of the patent specification. No new matter has been added.

Claims 9 to 11 depend on claim 8, and recite that the amorphous metal is iron based, includes boron and silicon, and that the permeability is achieved by heat treatment, respectively. Such limitations can be found in original claim 1 of the patent, for example. Claim 12 also depends on claim 8, and recites that the output in the secondary coil reaches more than 10kV with a primary current of less than about 120 amp-turns, and reaches more than 20kV with a primary current of 200 to 300 amp-turns within 25-100 μ sec. Support for claim 12 can be found,

CERTIFICATE OF MAILING BY EXPRESS MAIL

Express Mail Label No. EE 647 187 295 US

I hereby certify under 37 CFR §1.10 that this correspondence is being deposited with the United States Postal Service as Express Mail Post Office to Addressee with sufficient postage on the date indicated below and is addressed to the Commissioner for Patents, Washington, D.C. 20231.

for example, in col. 3, line 66 to col. 4, line 16, and in col. 4, lines 35-64 of the patent specification. No new matter has been added.

New independent claim 13 is similar to claim 1, but also does not include the limitations discussed above with regard to claim 8. Rather, claim 13 recites that the amorphous metal core is heat treated to have a permeability ranging from about 100 to 300. Support for this recitation can be found, for example, in col. 3, lines 3-15 and lines 52-53 of the patent specification. No new matter has been added.

New claim 14 depends on claim 13, and recites that the amorphous metal includes boron and silicon. Support for this can be found, for example, in claim 1 of the patent. No new matter has been added.

New independent claim 15 is similar to claim 1, but does not include the limitations discussed above with regard to claim 8. Rather, claim 15 recites that the amorphous metal core is non-gapped. Support for this limitation can be found, for example, in col. 3, lines 13-20 of the patent specification. No new matter has been added.

New claim 16 depends on claim 15, and recites that the amorphous metal includes boron and silicon. This is supported, for example, in claim 1 of the patent. No new matter has been added.

New independent claim 17 is also similar to claim 1, but does not include the limitations discussed above with regard to claim 8. Claim 17 instead recites that the iron-based amorphous metal core has a permeability ranging from about 100 to 300. Support for this recitation can be found, for example, in col. 3, lines 3-15 of the patent specification. No new matter has been added.

New claim 18 depends on claim 17 and recites that the amorphous metal further includes boron and silicon. This is supported, for example, in claim 1 of the patent. No new matter has been added.

The applicant has provided the status of all the reissue patent application claims, and has endeavored to indicate the support in the disclosure of the patent for the new claims being added. If the Examiner has any questions, please call the undersigned attorney at the telephone number listed below.
